

# EVALUATION SYSTEM OVERVIEW

ONEDROP.ORG

## MONITOR, EVALUATE AND LEARN

Our result-based approach documents project outputs, outcomes and overall impact in terms of sustainable access to water, sanitation, hygiene and changes in knowledge, attitudes and practices at individual and collective levels.

## WE COMBINE EXPERIENCE AND KNOWLEDGE

Thanks to the integrated MEL System (Monitoring, Evaluating, Learning), we can measure the performance and quality of our A·B·C for Sustainability™ approach. This result-based system features a multi-layered approach—project, program, strategic levels—and documents the outcomes of our interventions. This way, we can have a clear picture of the impact they have with respect to access to water and social change.

## MONITOR

Allow results, processes and experiences to be documented through real time data collection used as a basis to steer decision-making and learning processes.

## EVALUATE

Conduct systematic evaluations, acknowledge accomplishments and make recommendations for improvement.

## LEARN

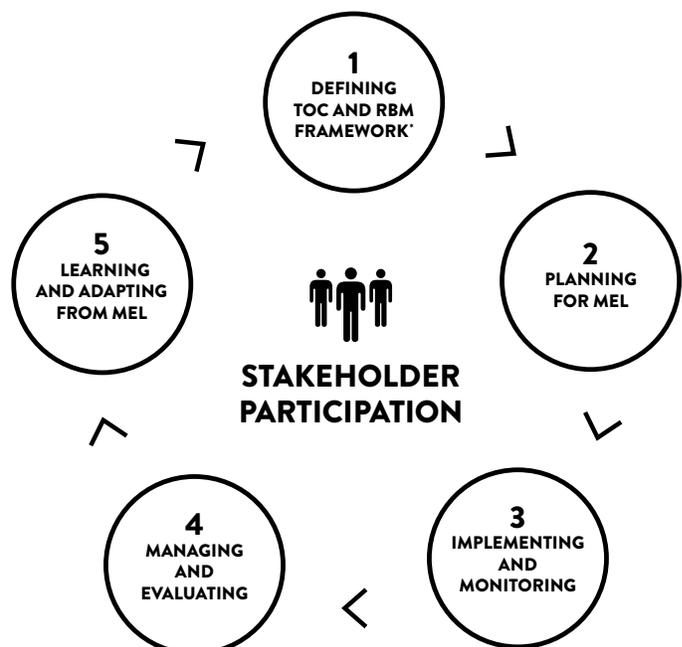

Support continuous improvement, reflect on success and how challenges can be overcome to increase transferability.

## WE CONTINUOUSLY IMPROVE

MEL results help us integrate our key learnings into future projects. Key Performance Indicators (KPIs) are defined for each project and independent studies are conducted two years after their completion. With respect to our A·B·C for Sustainability™ approach, it helps us stay informed on the level of sustainability of our projects in all the countries we operate.

## WE SEEK PROVEN METHODS

We are always on the lookout for innovative partners that offer technological advancements in measurement tools. Our partners help us to continually improve our reporting. Our latest partnership with AKVO enables us to measure and track in-field progress in real time, and also opens discussions to new ways of collaborating.
